Voters using smartphones made fewer errors in mock election

Date: March 4, 2014

Source: Rice University

Summary: Voters who cast their ballots via smartphones made fewer errors than they did when voting via traditional methods in a mock election, according to new research. Researchers found that while there are no consistent differences in efficiency and perceived usability between the smartphone-based system and other voting systems, smartphone owners made fewer errors on the mobile voting system than when they used traditional voting methods.
